Dashboard Design - Tableau

Date	29 October 2026
Team ID	Individual Project - Ujjawal Rathod
Project Name	Electric Vehicle Market Performance & Insights
Maximum Marks	5 Marks

Dashboard objective

Create a single decision-support dashboard with nine coordinated worksheets for EV sales, competitive landscape, technology adoption, range, satisfaction, and geography. Keep the Overview dashboard as the navigation anchor for the four-point Tableau Story.

The image below is a design mock-up rather than a capture of the published Tableau workbook. Use the existing Tableau Public link for the live dashboard and capture current screenshots from that workbook for formal evidence.

Design specification

Design element	Implementation	Reason
Header and KPI row	Project title, 300k-row source summary, 37 fields, 200 manufacturers, 7 regions	Sets scope and orients the reader; confirm row count from actual data source.

Design element	Implementation	Reason
Sales visual group	Sales by vehicle category, sales trend by model year, regional sales	Answers demand and portfolio questions first.
Competitive visual group	Top manufacturers and market-share view	Shows fragmentation without hiding the long tail.
Technology / experience group	Battery mix, range by category, range vs energy use, customer rating	Compares technology adoption and user outcomes.
Geography	Manufacturing country x market region heatmap	Separates manufacturing origin from market destination.
Filters and actions	Model Year, Region, Battery Type, Category; dashboard filter actions on relevant charts	Lets stakeholders test scenarios while retaining context.
Formatting	Consistent units, concise titles, visible zero baselines where appropriate, accessible contrast, descriptive tooltips	Improves trust and interpretation.
Layout	Overview page optimized for desktop; scrolling layout only where necessary; legends placed beside related charts	Avoids crowded visual clutter and supports presentation walkthroughs.

Major outcomes / observations to confirm

- Two-Wheeler Scooter is identified as a leading sales category in the prior project summary.
- Market share is highly fragmented; the leading manufacturer was previously summarized at about 0.6% of total market sales.
- NMC and LFP are the two leading battery chemistries in the earlier summary.
- Range differs markedly by category, while average range by chemistry was described as comparatively flat across 2018-2026.
- Average customer ratings were summarized at approximately 4.08-4.09/5 across categories.
- Manufacturing and regional views should use clearly labelled country/region fields and include tooltips for totals.
